
USING THE OHIO MEDICAID PREGNANCY RISK ASSESSMENT
FORM POPULATED BY THE PRAF ODIP API FROM THE OHIO
DATA INTEGRATION PLATFORM, UTILIZING AZARA DRVS

Pregnancy Risk Assessment Form – ODIP API

User Guide for API Users

VERSION 1.2, MARCH 1, 2024

**Department of
Medicaid**

PRAF User Guide for API Users

Welcome

This document is intended to help you get started using the Pregnancy Risk Assessment Form (PRAF) populated by the Ohio Data Integration Platform (ODIP) Application Programming Interface (API).

What is the Ohio Data Integration Platform (ODIP) utilizing Azara DRVS?

The ODIP leverages Azara DRVS to create a centralized data reporting and analytics software for Ohio community health centers. The Ohio Association of Community Health Centers (OACHC) partnered with Azara Healthcare to create a scalable infrastructure for network expansion and statewide population health. Utilizing the data within ODIP further enhances the interoperability and automation of data flow for PRAF submissions and decreases the reporting burden.

What is the PRAF ODIP API?

The PRAF ODIP Application Programming Interface (API) is a web-based software application that extracts data daily from an Azara DRVS and uploads the data in bulk (multiple patients) to NurtureOhio, readying the patient records for processing by a user from that healthcare provider. The user can quickly review the data in [NurtureOhio PRAF 2.0 Ohio Department of Medicaid's Online Notification of Pregnancy System website](#), edit if needed, and submit it for validation.

Currently, there is only one API available to implement this process. That is the PRAF ODIP API built by Azara Health Care, LLC for Ohio Federally Qualified Health Centers (FQHC) or FQHC Look alike (FQHC LAL) participating in the ODIP with the OACHC.

Note that other healthcare providers in Ohio that use an Epic electronic health record may participate in a similar effort to send PRAFs to NurtureOhio through the Medicaid Perinatal Risk Tool (MPRT). For information on the MPRT, contact imrp@osumc.edu.

What do I need from Azara and OACHC?

Here are the prerequisites you will need from OACHC and Azara Healthcare before using the PRAF ODIP API.

- ❑ You must work at an Ohio FQHC or FQHC LAL that utilizes Azara DRVS, which gathers data from your health center's electronic health record.
- ❑ You must participate in an onboarding process with Azara and OACHC to:
 - Identify how to capture data from your EHR that matches the PRAF minimum dataset.
 - Standardize the workflow for identifying Medicaid-eligible pregnant women who should have their data transferred to NurtureOhio.
 - Go through an initial testing phase.

To get started with the PRAF ODIP API to populate your PRAFS, contact Joel Kauffman at jkauffman@ohiochc.org.

What do I need from NurtureOhio?

Here are the prerequisites that you will need from NurtureOhio before using the PRAF ODIP API.

- Access to NurtureOhio account/login credentials
 - You must be a registered user of NurtureOhio with an OH|ID and have the prenatal visit role assigned for each OB practice for which you will submit PRAFs.
 - For information on how to gain access to NurtureOhio, see the [PRAF 2.0 NurtureOhio Interface: Medicaid Provider User Guide](#).
 - If you do not currently have access or have issues with access to NurtureOhio, please email Momsandbabies@medicaid.ohio.gov.

What is a summary of the workflow steps for using the PRAF ODIP API?

1. In your provider practice's electronic health record:
 - a. Make sure that the required data fields for a PRAF submission are completed, including first name, last name, Medicaid Patient ID, SSN, date of service, birth date of the patient, due date, address, telephone number, weeks, and days of gestation. This avoids unnecessary work and delays in completing a PRAF.
 - b. For patients with a missing Medicaid Patient ID, check alternative forms of identification (scanned Medicaid card, eligibility verification system).
 - c. Complete the required CPT Code (H1000) and Code Modifier (33) for the patient and date of service. This triggers the transfer of PRAF data for overnight processing by Azara.
2. Data will then be transmitted to Azara DRVS.
3. By the next business day, Azara will transfer the patient data for all patients identified for PRAF submission to NurtureOhio.
4. At the NurtureOhio website, log in to view the transferred PRAFs on the next business day.
5. Review the PRAF on the NurtureOhio website and edit and make changes if needed.
6. On the NurtureOhio website, finalize the form and submit it to the Ohio Department of Medicaid within 48 hours of being uploaded by Azara.

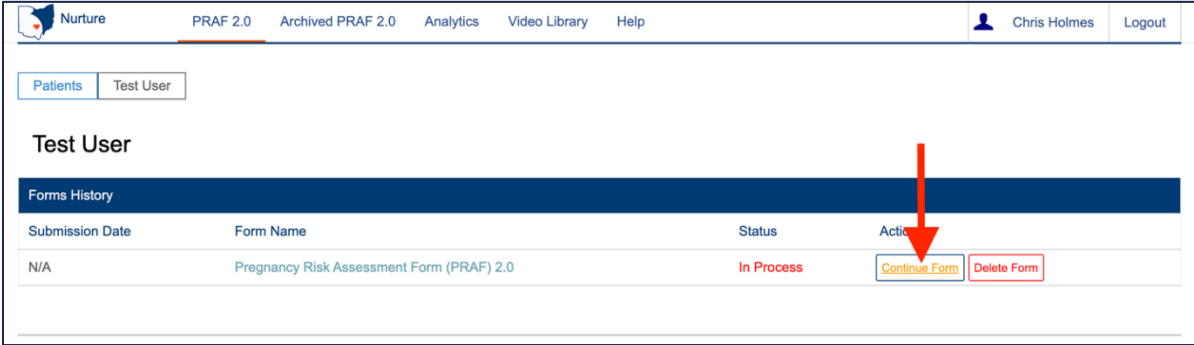

PRAF ODIP API Submissions

Finding the ODIP Transferred PRAF

ODIP PRAFs are transferred over to NurtureOhio as an in-process PRAF. These PRAFs are available to complete/submit for NurtureOhio users associated with the practice for the patient. These PRAFs are found in the in-process section of the patients' page. All PRAFs transferred via ODIP will be highlighted in light blue.

Users can select the patient's name and click "Continue Form" to finish submitting the PRAF.

Once in the PRAF form, filling out the form is the same as if you were filling out a PRAF normally.

When all patient data is entered into the PRAF, the user will select “VALIDATE & SUBMIT” for PRAFs from ODIP. NurtureOhio will check the PRAF form for completion, checking if all required fields are filled in. This step is the same validation that occurs for normal PRAF submissions. Once this step is completed, the next process of submitting the PRAF will be started automatically.

Pregnancy Risk Assessment Form (PRAF) 2.0

Progesterone Candidate

Progesterone Candidate?

Yes (gestational age is or will be between 16 & 24 weeks, this is a singleton gestation, the patient has had a previous singleton preterm birth prior to 37 completed gestational weeks that was related to spontaneous preterm labor, preterm ruptured membranes &/or cervical insufficiency)

No

BACK

SAVE FOR LATER | VALIDATE & SUBMIT

Medicaid Validation for ODIP Transfers

The next validation that occurs checks if the patient is found and covered under Medicaid. A third-party vendor does the validation check.

5.4.0

Validating Patient Information.

Please Wait.

If validation fails at this stage, the user will see a notification telling them the validation failed. Appropriate error messages will be displayed above the PRAF form to inform the user what needs to be addressed. **All PRAFs must pass validation to submit.**

The screenshot shows the 'Pregnancy Risk Assessment Form (PRAF) 2.0' interface. At the top, there are tabs for 'Patients' and 'Test User'. Below the title, there are two error messages in red: 'Patient Date of Birth Does Not Match the Patient on File.' and 'Invalid/Missing Patient Name.' A dark blue banner reads 'Needed by county for pregnancy notification.' The form fields include: 'Patient MMIS Number (Patient Medicaid ID)' with a value of '100000000000'; 'Patient Managed Care Plan ID (Optional)'; 'Patient First Name' with the value 'Test'; 'Patient Last Name' with the value 'User'; 'Estimated date of confinement (date baby is due)' with the value '05/31/2024'; 'Gestational Weeks' with a dropdown set to '7'; and 'Gestational Days' with a dropdown set to 'Choose One'. A white modal box with a red 'X' icon is centered over the form, with the text 'Validation Failed' and 'Please address the issue(s) above the PRAF form.' Below the modal is a red 'OK' button.

If NurtureOhio can decipher what fields need to be addressed, the user will be redirected to those fields on the form. These fields will be outlined in red.

This screenshot shows the same PRAF form as above, but with red outlines around the 'Patient First Name' and 'Patient Last Name' input fields. Red arrows point from the error messages at the top to these fields. The error messages are: 'Patient Date of Birth Does Not Match the Patient on File.' and 'Invalid/Missing Patient Name.' The 'Patient First Name' field contains 'Test' and the 'Patient Last Name' field contains 'User'. The other form fields and the 'OK' button from the previous screenshot are also visible.

There can be more than one error at once. The possible errors the user can see are as follows.

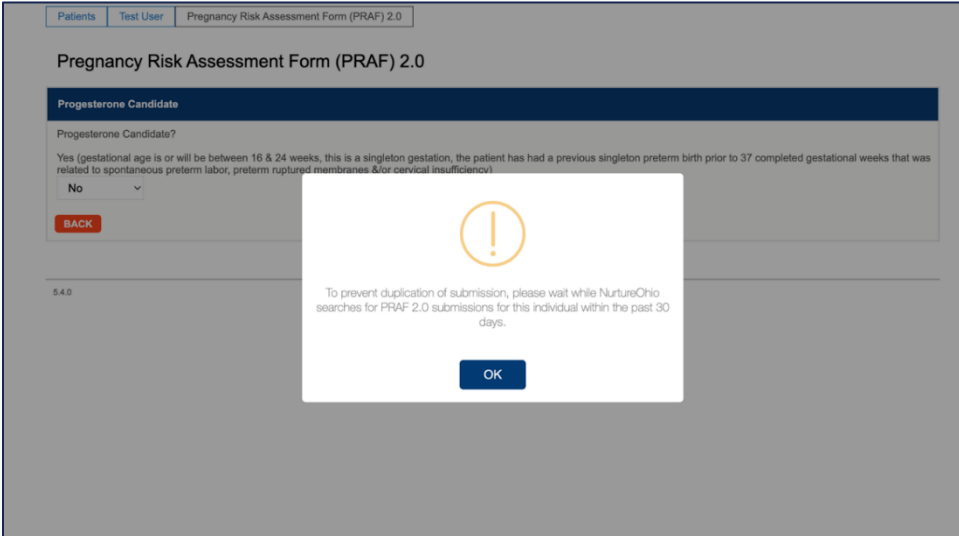

- Invalid/Missing Date(s) of Service.
- Patient Date of Birth Does Not Match the Patient on File.
- Invalid/Missing Patient Medicaid ID.
- Invalid/Missing Patient Name.
- Patient Not Found.
- Duplicate Patient ID Number.
- Must Provide Valid Patient Medicaid ID and/or Social Security Number.
- System unable to respond, please contact NurtureOhio Helpdesk.

Once the user has the patient validated, NurtureOhio will check for duplicate PRAFs for the patient in the system within the last 30 days.

PRAF Duplication Check

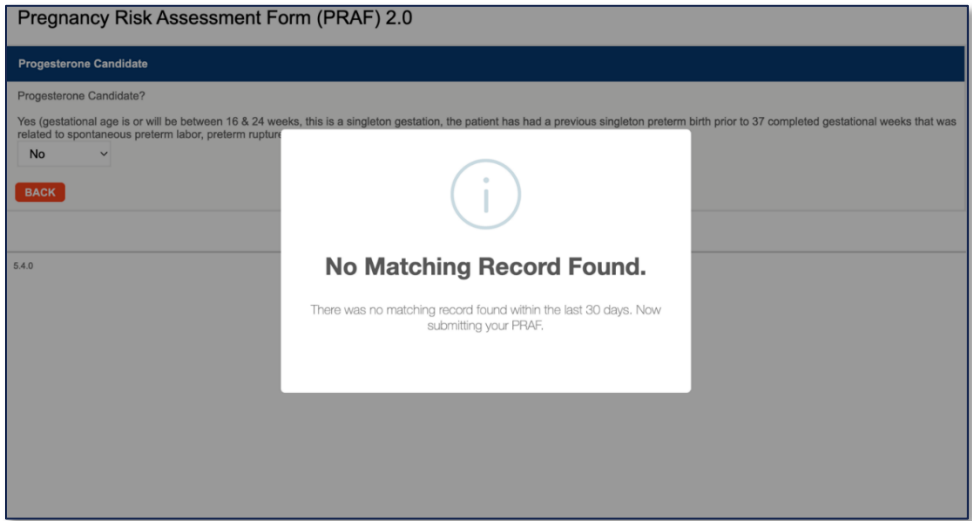

The patient duplication check looks for the same patient within the NurtureOhio system. It checks if the first and last name match; for example, if the PRAF was submitted for a person with the first name Jo Anne and another PRAF was completed for the same person, but with the first name Joanne, that will not be caught by the duplication check.

Patient duplication looks back 30 days for PRAFs submitted for the patient.

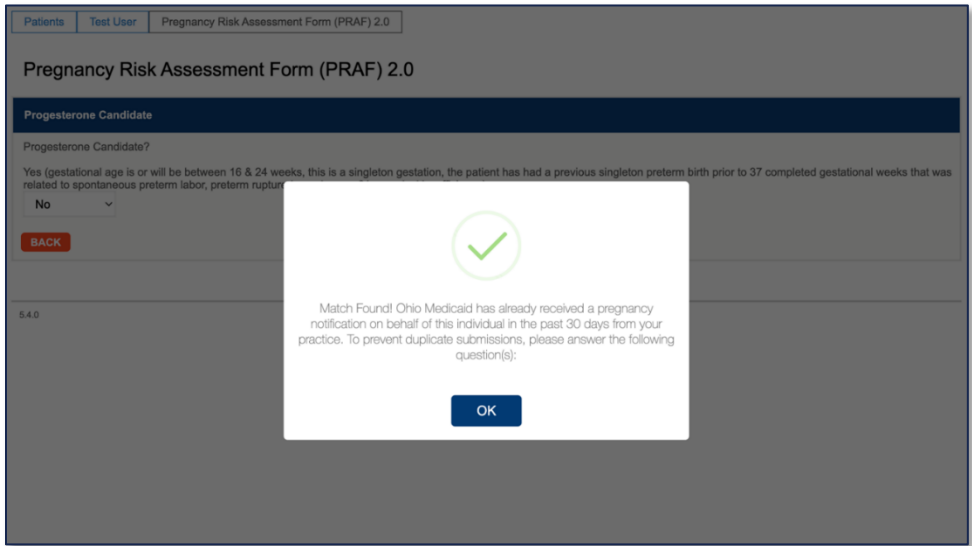

The screenshot displays the 'Pregnancy Risk Assessment Form (PRAF) 2.0' interface. At the top, there are navigation tabs for 'Patients', 'Test User', and 'Pregnancy Risk Assessment Form (PRAF) 2.0'. The main heading is 'Pregnancy Risk Assessment Form (PRAF) 2.0'. Below this, there is a section titled 'Progesterone Candidate' with a sub-heading 'Progesterone Candidate?'. The text below asks: 'Yes (gestational age is or will be between 16 & 24 weeks, this is a singleton gestation, the patient has had a previous singleton preterm birth prior to 37 completed gestational weeks that was related to spontaneous preterm labor, preterm ruptured membranes &/or cervical insufficiency)'. A dropdown menu is set to 'No'. A red 'BACK' button is visible. A white modal dialog box with a yellow exclamation mark icon is centered on the screen, containing the text: 'To prevent duplication of submission, please wait while NurtureOhio searches for PRAF 2.0 submissions for this individual within the past 30 days.' and an 'OK' button. The number '54.0' is visible in the bottom left corner of the form area.

If no duplicate PRAF is found in the NurtureOhio system in the past 30 days, the PRAF will be submitted as usual.

When a duplicate PRAF is found, and the user is attempting to submit the PRAF for the same practice on file, the user will be prompted with questions about whether patient information has changed since the previous submission.

Pregnancy Risk Assessment Form (PRAF) 2.0

Progesterone Candidate

Progesterone Candidate?

Yes (gestational age is or will be between 16 & 24 weeks, this is a singleton gestation, the patient has had a previous singleton preterm birth prior to 37 completed gestational weeks that was related to spontaneous preterm labor, preterm ruptured membranes &/or cervical insufficiency)

No

BACK

5.4.0

In the past 30 days has there been changes to the individuals health or social risk factors from the prior submission?

YES NO

Pregnancy Risk Assessment Form (PRAF) 2.0

Progesterone Candidate

Progesterone Candidate?

Yes (gestational age is or will be between 16 & 24 weeks, this is a singleton gestation, the patient has had a previous singleton preterm birth prior to 37 completed gestational weeks that was related to spontaneous preterm labor, preterm ruptured membranes &/or cervical insufficiency)

No

BACK

5.4.0

In the past 30 days has there been changes to the individuals pregnancy due date or number of fetuses?

YES NO

Answering all the above questions with "NO" will result in the PRAF not being submitted.

Pregnancy Risk Assessment Form (PRAF) 2.0

Progesterone Candidate

Progesterone Candidate?

Yes (gestational age is or will be between 16 & 24 weeks, this is a singleton gestation, the patient has had a previous singleton preterm birth prior to 37 completed gestational weeks that was related to spontaneous preterm labor, preterm ruptured membranes &/or cervical insufficiency)

No

BACK

5.4.0

Thank you for attempting to notify Ohio Department of Medicaid. At this time, a pregnancy notification has already been submitted on behalf of this individual. If you have any additional questions or concerns please notify us at MomsandBabies@medicaid.ohio.gov

OK

Answering either question with "YES" will prompt the user to "Update Existing PRAF Form." Choosing this option will update the previously submitted PRAF with the new PRAF information. A new PRAF submission is not created.

Selecting "Cancel" will stop the submission process and redirect the user back to the patient's page.

The screenshot shows the 'Pregnancy Risk Assessment Form (PRAF) 2.0' interface. A modal dialog box is centered on the screen, featuring a green checkmark icon. The text inside the dialog reads: 'Thank you for updating our records! Please continue submitting an updated ROP or PRAF 2.0 for this individual!'. At the bottom of the dialog are two buttons: 'Cancel' and 'Update Existing PRAF Form'. The background form is dimmed, showing a 'Progesterone Candidate' section with a 'No' selection and a 'BACK' button.

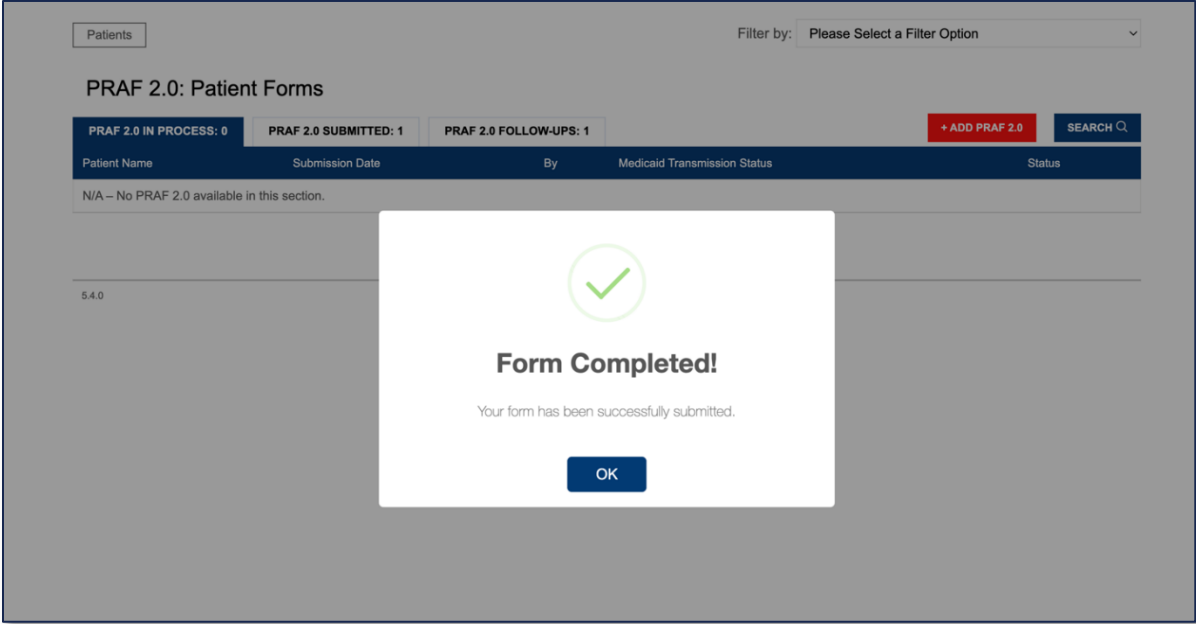

It is possible another practice submitted a PRAF for the patient in the last 30 days. In this case, a prompt will be presented to the user asking if they would like to create a new PRAF submission for the patient. Selecting "Yes" will create a new PRAF submission for the patient for the user's practice, and the previously submitted PRAF is untouched (it still exists for the other practice).

Selecting "No" simply redirects the user back to the patient's page.

The screenshot shows the 'Pregnancy Risk Assessment Form (PRAF) 2.0' interface. A modal dialog box is centered on the screen, featuring a green checkmark icon. The text inside the dialog reads: 'Match Found! Ohio Medicaid has already received a pregnancy notification on behalf of this individual in the past 30 days from another practice or provider. Would you like to submit a new PRAF for this patient?'. At the bottom of the dialog are two buttons: 'No' and 'Yes'. The background form is dimmed, showing a 'Progesterone Candidate' section with a 'No' selection and a 'BACK' button.

After the patient duplication check is passed, the PRAF is submitted for the user's practice. Everything beyond this point will act as a regular PRAF submission.

Completed PRAF

PRAF submissions transferred over from the API will still be highlighted in light blue.

Appendix A - list of PRAF data values pulled from ODIP

Date of Service	Patient Zip Code
Patient MMIS Number	Patient Phone
Patient Social Security Number	Primary Language is English
Patient First Name	Primary Language (if not English)
Patient Last Name	How does the patient describe their ethnicity?
Estimated Due Date	How does the patient describe their race?
Gestational Weeks	Current Gestational Diabetes Mellitus (GDM) diagnosis?
Gestational Days	Previous diagnosis of GDM during pregnancy?
Date Gestational Age Recorded	Is patient currently smoking or using tobacco products?
Number of Fetuses	Progesterone Candidate?
Patient Date of Birth	
Patient Street	
Patient City	
Patient State	

Appendix B - List of PRAF manual entry fields (7):

- Name of Medicaid Managed Care Plan
- Patient County
- I would like my patient's Managed Care plan to communicate with my office regarding an urgent need.
- Patient would benefit from Managed Care and/or County Job and Family Services assistance with: For Medicaid Application Assistance call 1-844-640-OHIO. For questions about Medicaid Programs, covered services or managed care call 1-800-324-8680.
- Referral to smoking / tobacco cessation resource?
- Please select the additional resource(s) you plan to connect the patient to.
- Opioid Use Follow-Up
- Other needs: Additional needs not listed above
